

API DOCUMENTATION

LAB4-REST_API

Base URL: http://localhost/LAB4-REST_API/src/

Format: application/json

Description: This API connects to two clients (console-based and web-based). It consists of endpoints responsible for handling login, registration, and inventory management (add, view, update, delete). It also provides standardized responses with appropriate status code.

Endpoints

1. POST/register.php

Description: Registers a new user (admin/customer) into the system.

Request Body:

JSON

```
{
  "user_email": "string",
  "user_pass": "string (min 8 chars)",
  "first_name": "string",
  "last_name": "string",
  "contact": "string",
  "user_role": "admin|customer"
}
```

Responses:

- **201** - User created successfully
- **400** - Password is too short (minimum 8 characters)
- **409** - Username already taken

2. POST/Login.php

Description: Authenticates credentials and start a user session

Request Body:

JSON

```
{ "user_email": "string", "user_pass": "string" }
```

Responses:

- **200** - Login successful
- **401** - Incorrect password
- **404** - Username does not exist

3. POST/add_to_inventory.php

Description: Adds a new floral product to the inventory.

- **Request Body:** flower_name, stock, base_price_per_stem, date_arrived, shelf_life.

Responses:

- **201** - Flower added successfully
- **400** - All fields are required
- **500** - Insert failed

4. GET/view_inventory.php

Description: Retrieves a complete list of products currently in the database

Parameters:

- inventory_id(int, required)

Success Response (200 OK):

JSON

```
{
  "status": "success",
  "message": "Inventory list retrieved successfully"
  "data": [
    {
      "inventory_id": 1,
      "flower_name": "Rose Bouquet",
      "stock": 50,
      "base_price_per_stem": 499.00
      "date_arrived": "2026-04-17"
      "shelf_life": 7
    }
  ]
}
```

5. PUT/update_inventory.php

Description: Modifies details of an existing inventory product

Request Body: inventory_id (Required) + updated fields.

Sample responses:

- **200** - ID verified. Ready for new data.
- **200** - Inventory updated successfully
- **400** - Invalid input data
- **404** - Record not found. ID \$inventory_id does not exist.
- **500** - Failed to update inventory

6. DELETE/delete_from_inventory.php

Description: Removes a specific product from the database.

Parameters:

inventory_id (int, required)

Example Response:

- **200** - Product deleted successfully
- **400** - Invalid input data
- **404** - Record not found
- **500** - Failed to delete product

Response Code

Code	Status	Meaning	Description
200	success	OK	The request was successful.
201	success	Created	New resource (user/item) was successfully added
400	error	Bad Request	Missing required fields in the JSON body.
401	error	Unauthorized	Incorrect password or credentials.
404	error	Not Found	The username or endpoint does not exist.
405	error	Method Not Allowed	Used GET when POST was expected (or vice versa).
409	error	Conflict	Username already exists
500	error	Server Error	Database connection failed or SQL error.
